Taking away incentives will hit SA auto sector hard, industry body warns

Sep 18 2019 19:34 Lameez Omarjee, Fin24

fin24

Reducing rebates on excise duties will negatively impact the competitiveness of the auto industry, members of Parliament heard.

The Standing Committee on Finance on Wednesday heard inputs from the National Association of Automobile Manufacturers of South Africa (Naamsa) on the 2019 draft tax bills.

The amendment in question specifically relates to the calculation of ad valorem duty in the 2019 draft income taxation amendment bill. Naamsa has put forward that the amendment would result in substantial damage of the competitiveness of the local vehicle manufacturers and retail sales in South Africa.

Transformation in automotive industry non-negotiable - Davies

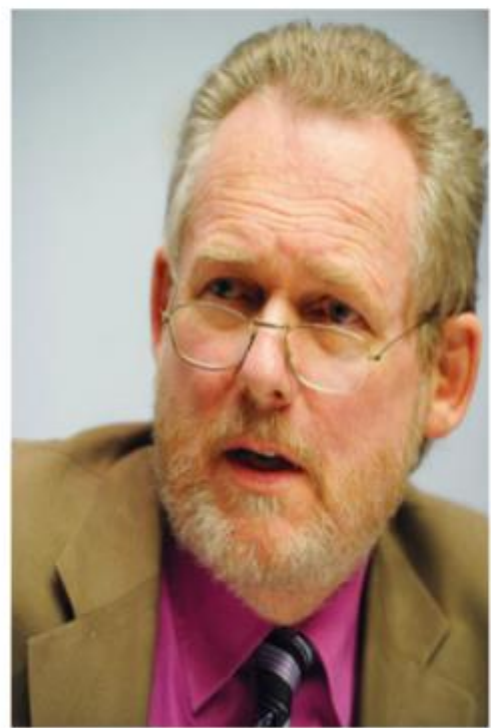

Apr 05 2017 17:44

Cape Town – Imports of automotive components have surged to historical levels at R50bn, while local content in vehicles have declined to below 39%, affecting employment in the sector, said Trade and Industry Minister Rob Davies on Wednesday.

Speaking at the inaugural National Association of Automotive Component and Allied Manufacturers (NAACAM) Show and Localisation Indaba, Davies said the auto component employment in South Africa has remained a concern, as it has “somewhat stagnated”.

“Through the 2035 SA Automotive Masterplan process,” Davies said, “government seeks to arrest some of the drawbacks in the sector, while also ensuring industry growth over the long term. This Masterplan process is also making us realise that to ensure the long term sustainability of the automotive assembly and

Master Plans and industrial policy

OVERVIEW

The relaunch of industrial policy from early 2019 included proposals for Master Plans for priority industries. The Master Plan approach sets a framework for constructive engagement and implementation that can respond to changing circumstances and evidence. This policy brief draws on experience with the development of Master Plans for various sectors as well as the experience of sector strategies in the auto industry to propose a standard methodology for the process.

BACKGROUND AND AIMS

- Willingness by both government and the dominant companies to ensure high-level

Master/Strategic/Sector plan approach

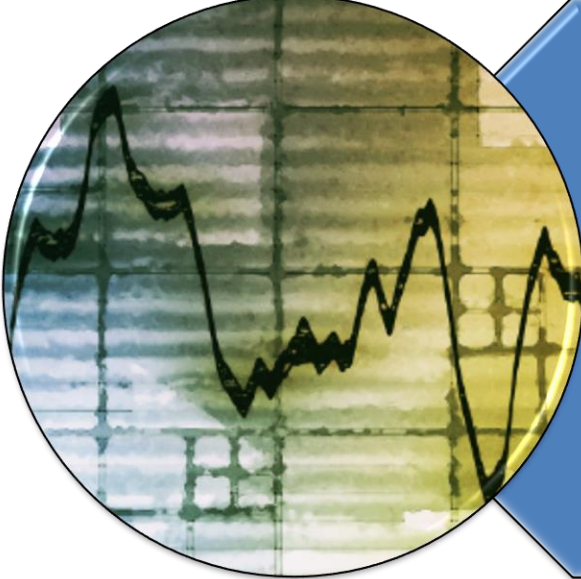

1. The dual aim to:

- ❖ ***Generate a short list of key strategic interventions,***
- ❖ ***Establish a platform for future high-level engagements to address problems.***

2. A strong evidence base focused on analysis of economic and technological trends in the industry both local, regional and abroad,

3. Extensive engagement between government and industry, to reach agreement & help resolve disputes about current trends and potential solutions.

1. Status Quo

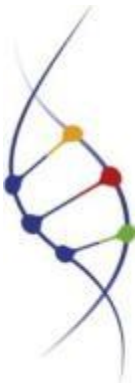

Domestic analysis (baseline)

- Agreed methodology
 - a. Production
 - b. Employment
 - c. Exports
 - d. Investment
 - e. Scope for new business

Global analysis (benchmark)

- a. Demand
- b. Production
- c. Trade
- d. Raw material cost
- e. Human Resource
- f. Technology

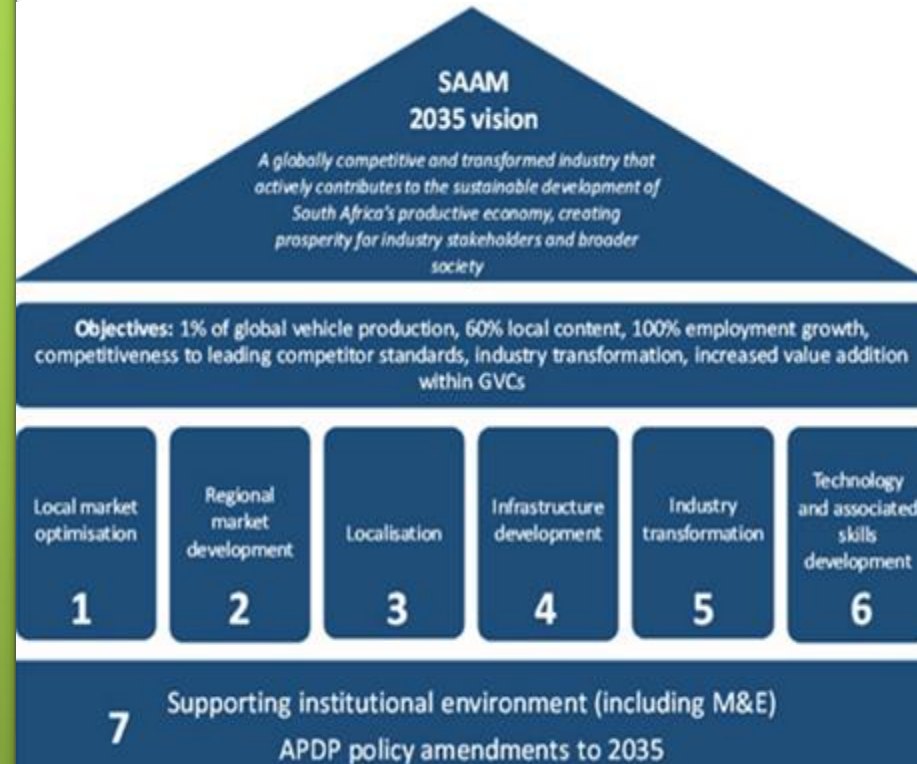

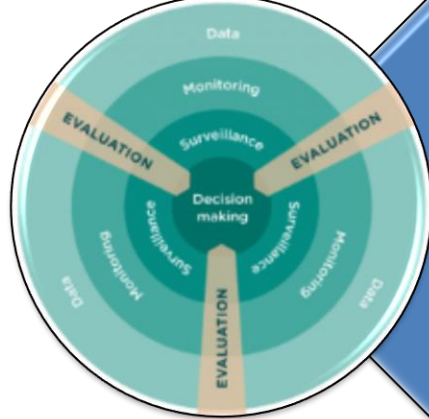

2. Development of scenarios & sector plan

Scenarios projecting targeted outcomes eg:

- without a Master/Sector Plan
- with a Master/Sector Plan but with slow overall growth,
- with a Master/Sector Plan and at least moderate economic growth.

3. Evidence based M&E

Institutionalisation through a authoritative framework to

- lead implementation.
- coordinate, monitor and evaluate progress against objectives
- accountability across the spectrum of responsible stakeholders.

SAAM 2035 vision

A globally competitive and transformed industry that actively contributes to the sustainable development of South Africa's productive economy, creating prosperity for industry stakeholders and broader society

Objectives: 1% of global vehicle production, 60% local content, 100% employment growth, competitiveness to leading competitor standards, industry transformation, increased value addition within GVCs

SAAM 2035 vision

A globally competitive and transformed industry that actively contributes to the sustainable development of South Africa's productive economy, creating prosperity for industry stakeholders and broader society

Objectives:

- 1. Grow domestic vehicle production to 1% of global output (projected to reach 140 million units annually by 2035)*
- 2. Increase local content in South African assembled vehicles to 60% (from 39% in 2015)*
- 3. Double total employment in the automotive value chain (from 112,000 to 224,000)*
- 4. Improve automotive industry competitiveness levels to that of leading international competitors*
- 5. Achieve industry transformation across the value chain*
- 6. Deepen value addition across selected commodities/technologies*

SAAM 2035 vision

A globally competitive and transformed industry that actively contributes to the sustainable development of South Africa's productive economy, creating prosperity for industry stakeholders and broader society

2. Regional Market Development

....to develop a regional market dynamic. There is presently no Sub-Saharan African (SSA) economy with a new vehicle market exceeding 30,000 units of annual demand due to a variety of reasons, key being the importation of second-hand vehicles and the size of the economies.

It is important therefore to develop a business case for the establishment of a regional automotive trade and production block that positions SSA as a viable automotive space.

Vision

Key objectives: production and sales growth, employment, competitiveness and investment

1.

Growing domestic, regional & export market

2. Quality & standards

3. Value-addition & beneficiation

4. Technology & Innovation

5.

Skills development & capacity building

6.

Sustainable use & reliable supply

7. Ongoing engagement on unblocking and growth
Coordination, Consultation, Monitoring & Evaluation
Compliance, enabling policy and regulation: ABS, IKS, etc.
